PROCESSING SOFTWARE  
SINCE 1997

## Check Archive

How many checks will you have to copy today?

# Check Archive

Do you spend hours at the copy machine coping received checks for archive purposes? Not only do you spend time spreading the checks out on the glass but then you have to file all that paper?

Maybe you use a multifunction printer, copier, scanner and fax combo machine to actually scan the checks and just save the image in a folder on your PC or the server. You then have to come up with a scheme to identify each check and type that information in each time you scan.

Once you have saved all those checks, no matter which method you use, the challenge is to find the check you need right now that was scanned weeks or months ago.

With Check Archive from Jaguar Software it's quick and easy. Use almost any scanner, maybe even that MFP you already have, just scan the checks and Check Archive does the rest. Check Archive reads the information from the check and uses that information to index the check. Check Archive then allows you to search for that check using any of the captured information such as account number, bank number, amount, date, or other information stored with the check image.

The screenshot shows the Check Archive software interface. At the top, there's a menu bar with 'System', 'Control', 'View', and 'Help'. Below that is a toolbar with various icons. The main area is a table with columns: Item ID, Batch #, Item Type, Comm Check#, ABA/RTN, Check#, Account #, Amount, Reference #, MISC, and Capture Date & Time. The table contains several rows of check data. Below the table, there's a large image of a check that has been scanned. The check is from 'Jaguar Software - personal size test check' and is for \$35.00, payable to 'FBI'. The check is dated 6/4/12 and has a MICR line at the bottom. The software interface also shows a status bar at the bottom with 'Ready', '43 Items / 5 Moreads / 0 Rejects / 43 Images', and a balance of '\$12479.45'.

## CHECK ARCHIVE MAKES SAVING CHECKS EASY.

**Jaguar's Check Archive program enables you to archive checks in a single pass, recognize MICR information such as account number, bank routing and transit number, check number and even amounts. Check Archive -**

- Gives you the functionality of five applications in one: scan, correct, input data, archive, and research.
- Takes advantage of cutting-edge technology in CAR/LAR to automate the input process and limit the need for manual data entry.
- Provides additional fields allowing for input of data important to your operation, such as PO#, Customer Name, Account #, and other searchable data.
- Has the capability to search for checks based on any or all index fields, including the additional information added by you.
- Works with all industry standard check scanners and many of the document style scanners using a TWAIN interface.
- Allows you to consolidate multiple business locations into one archive, simplifying research even further.
